With fundraising met, the restoration of the pipe organ at McAllister has moved into its final phases. The wind reservoirs are being releathered and prepared for reinstallation. Stoppers will be reinstalled into the large pipes of the Pommer stop in the wings on the front of the organ. The organ console will undergo renovation and the old piston board in the hallway behind the organ case will be replaced to allow the organist to set pistons while at the console of the organ...and soon our pipe organ will return to full voice.
